

CLAIM AMENDMENTS

The claim amendments set forth below are made presuming entry of the amendments to the international application under PCT Article 19 has occurred.

1-6. (Canceled)

7. (New) A sun visor for motor vehicles, comprising a hollow visor body and a receiving element for holding a flat object, such as a fuel card or a parking ticket, a slotlike receiving opening being formed in the visor body, through which receiving opening the object can be inserted into a receiving area which is arranged in the cavity of the visor body, wherein the sun visor has two jointed half-shells, wherein at least one of said two half-shells has the slotlike receiving opening, and wherein the object is able to be held in the interior of the sun visor by being wedged between the two half-shells.

8. (New) The sun visor as claimed in claim 7, wherein the receiving opening is formed in the at least one of said two half-shells in the region of a separating joint with respect to the other half-shell of the sun visor.

9. (New) The sun visor as claimed in claim 7, wherein at least one of the half-shells has ribs on its inner side which are used to guide the object received.

10. (New) The sun visor as claimed in claim 7, wherein an elastically flexible bearing region is formed in the receiving area.

11. (New) The sun visor as claimed in Claim 7, wherein the object is bent along its edge which is at the front in the direction of insertion and is clamped in this way, and wherein, for this purpose, ribs, which are oriented along the direction of insertion, protrude from two opposite walls of the receiving area, mutually forming a covering.

12. (New) The sun visor as claimed in claim 7, wherein, on its inner side, one of the half-shells has coatings or inlays over bearing regions for the object.

13. (New) The sun visor as claimed in claim 8, wherein at least one of the half-shells has ribs on its inner side which are used to guide the object received.

14. (New) The sun visor as claimed in claim 8, wherein an elastically flexible bearing region is formed in the receiving area.

15. (New) The sun visor as claimed in claim 9, wherein an elastically flexible bearing region is formed in the receiving area.

16. (New) The sun visor as claimed in Claim 8, wherein the object is bent along its edge which is at the front in the direction of insertion and is clamped in this way, and wherein, for this purpose, ribs, which are oriented along the direction of insertion, protrude from two opposite walls of the receiving area, mutually forming a covering.

17. (New) The sun visor as claimed in Claim 9, wherein the object is bent along its edge which is at the front in the direction of insertion and is clamped in this way, and wherein, for this purpose, ribs, which are oriented along the direction of insertion, protrude from two opposite walls of the receiving area, mutually forming a covering.

18. (New) The sun visor as claimed in Claim 10, wherein the object is bent along its edge which is at the front in the direction of insertion and is clamped in this way, and wherein, for this purpose, ribs, which are oriented along the direction of insertion, protrude from two opposite walls of the receiving area, mutually forming a covering.

19. (New) The sun visor as claimed in claim 8, wherein, on its inner side, one of the half-shells has coatings or inlays over bearing regions for the object.

20. (New) The sun visor as claimed in claim 9, wherein, on its inner side, one of the half-shells has coatings or inlays over bearing regions for the object.

21. (New) The sun visor as claimed in claim 10, wherein, on its inner side, one of the half-shells has coatings or inlays over bearing regions for the object.

22. (New) The sun visor as claimed in claim 11, wherein, on its inner

side, one of the half-shells has coatings or inlays over bearing regions for the object.

23 (New) The sun visor as claimed in claim 13, wherein an elastically flexible bearing region is formed in the receiving area.

24. (New) The sun visor as claimed in Claim 13, wherein the object is bent along its edge which is at the front in the direction of insertion and is clamped in this way, and wherein, for this purpose, ribs, which are oriented along the direction of insertion, protrude from two opposite walls of the receiving area, mutually forming a covering.

25. (New) The sun visor as claimed in Claim 14, wherein the object is bent along its edge which is at the front in the direction of insertion and is clamped in this way, and wherein, for this purpose, ribs, which are oriented along the direction of insertion, protrude from two opposite walls of the receiving area, mutually forming a covering.

26. (New) The sun visor as claimed in Claim 15, wherein the object is bent along its edge which is at the front in the direction of insertion and is clamped in this way, and wherein, for this purpose, ribs, which are oriented along the direction of insertion, protrude from two opposite walls of the receiving area, mutually forming a covering.
